1. Abstract

ShramConnect is a web-based platform designed to connect job seekers with employers. The system provides an interface where users can explore job opportunities and understand workforce requirements. It aims to reduce the gap between employers and skilled workers by providing a centralized platform.

---

2. Introduction

In today's digital era, employment platforms play a key role in connecting job seekers and recruiters. Traditional job searching methods are time-consuming and inefficient.

ShramConnect provides a simple and responsive web solution to make job information accessible. The project demonstrates how a basic web platform can support employment connectivity.

---

3. Objectives

- Build a responsive web-based platform
- Provide job-related information
- Improve accessibility for users

- Create a simple and clean UI
- Demonstrate front-end development skills

---

4. Scope of Project

- Useful for students and freshers
- Can be extended into a full job portal
- Supports multiple industries
- Can integrate backend systems in future

---

5. Literature Review

Existing job portals like Naukri and LinkedIn provide advanced features such as resume building, job alerts, and networking.

ShramConnect focuses on the basic structure of such systems and provides a simplified version using frontend technologies.

---

6. System Analysis

Existing System

- Manual job search
- Limited accessibility
- Time-consuming

Proposed System

- Web-based platform
- Easy navigation
- Fast information access

---

7. System Design

Architecture

- Frontend-based system

- Static website structure

Design Approach

- Modular design
- Responsive layout
- User-friendly interface

---

8. Technologies Used

- HTML5 for structure
- CSS3 for styling
- Bootstrap for responsiveness
- JavaScript for interactivity

---

9. Modules Description

Home Module

Displays introduction and main interface

Navigation Module

Allows users to move across pages

Job Information Module

Shows available opportunities

UI Module

Handles design and responsiveness

---

10. Implementation

The project is implemented using a structured approach:

- Created HTML layout
- Applied CSS styling
- Integrated Bootstrap

- Added JavaScript for interaction

---

11. Testing

Types of Testing

- Functional Testing
- UI Testing
- Browser Compatibility Testing

Results

- All pages load correctly
- Navigation works properly
- Layout is responsive

---

12. Advantages

- Simple and easy to use
- Lightweight design
- Fast loading
- Beginner-friendly

---

13. Limitations

- No database
- No login system
- Static content only

---

14. Future Scope

- Add backend using PHP or Node.js
- Database integration
- User authentication system
- Admin dashboard
- AI-based job matching
- Mobile application

---

15. Conclusion

ShramConnect demonstrates how a web platform can be used to connect job seekers and employers. It provides a strong foundation for developing a full-scale job portal. The project highlights the importance of digital solutions in employment systems.

---

- Web development tutorials
- HTML, CSS, Bootstrap documentation
- Online learning platforms
- GitHub repositories

□ Add Screenshots Section (Important)

(Add 4–5 pages of screenshots here)

- Home Page
- Job Section
- Navigation
- UI Design

□ Viva Questions (Bonus)

1. What is HTML?
2. Difference between CSS and Bootstrap
3. What is responsive design?
4. What is JavaScript used for?
5. What is a web application?

□ Final Notes

- This report can be extended to 30 pages by adding screenshots
- Print with proper formatting
- Use headings and page numbers

- Add college logo on first page

This is a **complete, submission-ready report**.
